

Below is a Laydown (a call with no objections)

If your tone's right and you say this word-for-word, you'll set one out of every ten people you talk to.

You: "Hey (name), can you hear me?"

Prospect: "Ya whose this?"

You: "This is (Name), I'm working near this property on (address) in (City). Do you still own that?"

Prospect: "Yes I do"

You: "Ok great. We got called out to inspect a couple of properties nearby **yours**, and have been finding some *pretty bad hail damage* from the **storm** on **(date)**. *Have you had anyone inspect your property yet?*"

Prospect: "no one has inspected it"

You: "Perfect that's why I called. We're going to be near your property (this week, next week, tomorrow, etc). We can inspect it and let you know if there's anything to be worried about."

Prospect: "Sounds good to me"

You: "Are you going to be at the property next week?"

Prospect: "No I won't be there"

You: "No problem, Is there anyone we should check-in before we get up there?"

Prospect: *tells you to check-in with someone or says you're good to just get up there.*

You: "Got it. What's a good email for you? Going to send over our insurance and more information about us."

Prospect: *My email is..."

You: "Ok I got *read back email and make sure you spelled it correctly*

Prospect: "that's correct"

You: "Perfect. We'll give you a call after the inspection and let you know what we see."

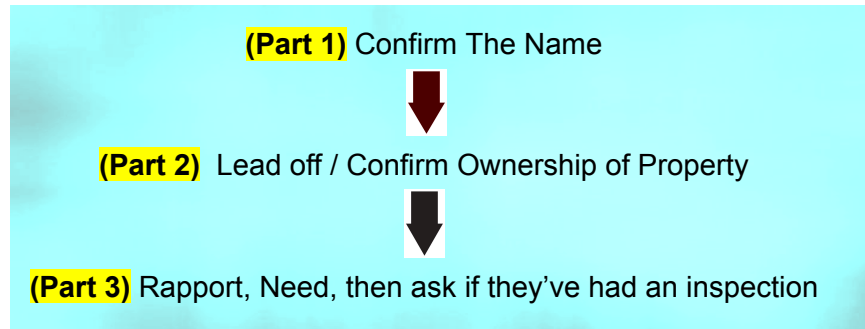

Prospect: "Thank you"

You: "No problem, talk to you later"

End Of Call

Here's the framework of this call, so you can better understand each stage.

The opening of every Cold Call goes like this.

After the opening you'll do these three things. **Close** and **Qualify** can be interchangeable. You can Qualify before you close, you can close before you qualify, or you can close and qualify at the same time.

Close - **Qualify** (Ask if they'll be on-site) - **Collect** (Email and other relevant contact info if necessary)

First 45 seconds looks like this

You: "Hey (name), can you hear me?"

Prospect: "Ya whose this?" ***name confirmed*** **(Part 1)**

You: "This is (Name), I'm working near your property on (street name) in (City)."

Prospect: "Yes I do" ***ownership confirmed*** **(Part 2)**

You: "Ok great. We got called out to inspect a couple of properties nearby **yours**, and have been finding some *pretty bad hail damage* from the **storm** on **(date)**. *Have you had anyone inspect your property yet?*" **(Part 3)**

There are only 2 possible outcomes after part 3, An objection or "no one has inspected it"

If they tell you "no one has inspected it" you **Close**

You: "Perfect that's why I called. We're going to be near your property (this week, next week, tomorrow, etc). We can inspect it and let you know if there's anything to be worried about."

Prospect: "Sounds good to me"

Now you'll **Qualify** by finding out if they'll be at the property.

You: "Are you going to be at the property next week?"

They will either say Yes or No

Prospect: "Yes, I'll be there"	Prospect: "No, won't be there"
You: "Awesome, What day works best for you next week?" Prospect: "this day works" You: "Perfect, I'll have my partner stop by. They don't need to take up any of your time but would love to shake your hand, and let you know how we can help if there's any damage up there."	You: "No problem, Is there anyone we should check-in before we get up there?" Prospect: tells you to check-in with someone or says you're good to just get up there. You: "Got it."

The next step is to **collect** their email.

You: "What's a good email for you? Going to send over our insurance and more information about us."

Prospect: *My email is..."

You: "Ok I got *read back email and make sure you spelled it correctly"

Prospect: "that's correct"

You: "Perfect. We'll give you a call after the inspection."

Prospect: "Thank you"

You: "No problem, Bye"

End Of Call

Objections

The truth is most objections at this stage aren't objections, they are smoke screens.

Objections are legitimate reasons for saying no, price, time, need, etc. at this stage you will rarely encounter an objection, what you will encounter is a smokescreen. These are no objections and shouldn't be treated as such, smokescreens are like a girl telling you she has a boyfriend, not because she really does, but because she doesn't want to be bothered. When encountering smokescreens the process is as follows, acknowledge, and continue right with your pitch. Don't give it validity or power, but also don't blow past it like you don't care what they are saying. It's the perfect happy medium. Let me demonstrate

Prospect: "I didn't have any damage from the storm"

Bad Salesman: "Yes you did, I see it in my system that you got hit by 1.5 inch hail so you definitely have damage" (don't do this)

Good Salesman: "That could definitely be true, when I stop by I'll measure any damage I find to make sure it matches the hail that fell on (date), so at least you'll know what's really up there. We can stop by next week, will you be on site or should I call you when I'm done?" (do this)

See the difference, by acknowledging their concern you don't come off like a dick, you also don't let it deter you from your goal.

More objections

Prospect: "I'm good, I'm not interested, I'm fine, etc"

"I totally get that, just so nobody calls you again... If you had real legitimate damage that you'd have to fix eventually, and the insurance company would pay you to fix it now instead, you'd at least want to know about that right?"

Prospect: "Yea..."

"Great, well that's all we look for and it doesn't cost you anything." then **Close**

"I need to chat with my business partner"

"I totally understand that, I'll go ahead and knock out my inspection, and send you the photos and some basic information you can send to him. That way if you do have

damage you have something to go over with him and if not you don't even need to bother him about it."

"I don't have any damage"

"Ya there's a good chance that's true, and if you don't I'll give you a clearance document that you can turn into your insurance company to help lower your rates, and if for some reason you do at least you'll have all the photos and an estimate of what the insurance company owes you to fix it."

"I don't want my rates to go up"

"That's a great concern. Unfortunately, it's affected by how many people file in this zip code. So either you'll be stuck with damage and higher premiums paying for the Neighbors new roofs, or you'll have a rate increase and a new roof with a warranty to show for it."

"I got a new roof recently"

"That's great. And your roof absolutely may be in great shape, but the same way if someone bumped into your new car you'd still have damage, the same may be true with your roof, that's why we're doing free inspections to let you know either way."

"We don't want anyone getting up on our roof."

I definitely understand that. We actually prefer to use a drone. That way no one has to physically get on your roof.

"I'll Call My Insurance"

"Perfect, that's exactly why I called. We work with your insurance. My job is to let you know if it even makes sense to have them send an adjuster. I don't know if that's necessary yet, and we don't wanna waste your carrier's time. I'll stop by this week and let you know what the damage looks like. I already have guys nearby so it won't cost you anything."

"Someone already came out to take a look."

"Did they find any damage?"

Prospect: "Yes, they found damage"

"Okay awesome, are you guys going through Insurance to get it fixed?"

Prospect: "yes"

"That's great to hear! Claims and construction is a long process, and things go wrong all I'd love to get you over our information and show you our process so you have another good option in case you need one."

Prospect: *"No, they didn't find damage"*

"That's great! Did they get you a Certificate of clearance?"

Prospect: *"No" or "What's that?"*

"It's super important to have photos after the storm showing you don't have any damage, so If you ever have another storm insurance can't try to deny your claim due to an old date of loss, the best way to prevent that is with a certificate of clearance and photos showing you're in the clear. I can stop by next week and put that together for you."

(If it's a metal roof) Did they get up there at night? Pitch night inspect and how a lot of damage isn't visible during the day. Then, get right back to where you left off in the script.

"We have a roofing guy already."

"That's awesome. I'm sure he's already on top of things, has he gotten you guys approved yet?"

"Yes."

"Great, I'm happy to hear that. When roofers compete, homeowners win. I'd at least love to get you an estimate, and my information, so if you have any trouble in the future you have another option."

"No."

I'm sorry to hear that. I'd at least love a chance to earn your business, I'll get you over our information, an estimate of what the insurance company owes you to fix it, and a breakdown of our process, if you feel like he's a better fit i'll have no hard feelings but at least I did what I could to help you.

Close

Closing is the most important part of the call. If you don't close you have a 0% chance of ever setting an inspection.

No matter how bad your pitch is, if you try to close you at least have a chance at setting that inspection.

There are 3 types of Closes we like to use

1. Assumptive Close
2. Option Close
3. Best Case Worst Case

You can combine all these closing techniques together, and the better you get at doing it the more leads you'll set.

Assumption Close: the assumptive close is all about telling the prospect what you're going to do instead of asking. You're assuming he's just going to say yes.

Example: "I'll be there next week, we'll stop by, inspect the building, and let you know if there's anything you should be worried about."

Option Close: An option close gives the prospect two choices — an either/or question — where both options end with a yes to your inspection. The key is to avoid questions that make it easy for them to say no. You never want to close with a yes-or-no question. This is how you keep control and guide the conversation to a set.

Example: "Would you like me to call before the inspection to check in, or should I just reach out afterwards and walk you through what we find?"

Best Case / Worst Case: The point of the Best Case / Worst Case close is to show the prospect that no matter what, letting us inspect their building is a no-brainer. It works best on skeptical or hesitant owners who are still on the fence about an inspection.

Example: "Best case scenario, I get up there and you have no damage. I'll send you a photo report and a clearance certificate for your records. Worst case, I do find something and we'll go over what the damage looks like, if it's covered by insurance, and what we can do to help you from there. Either way, it doesn't cost you anything."
